

STACKER CONTROL (STC-XX)

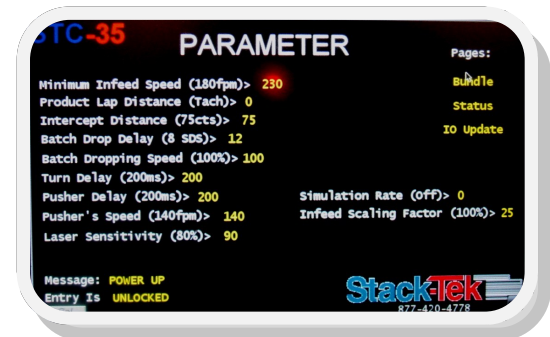

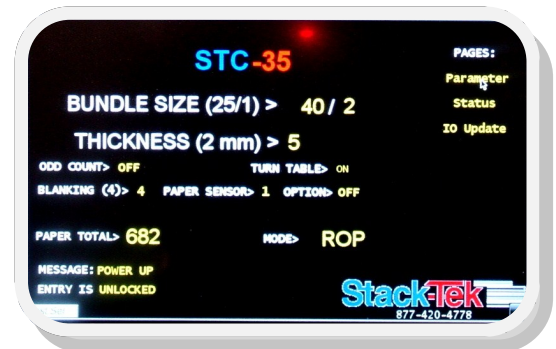

Touch screen or control card failure is causing many older stackers to be retired before their time. Keep those older machines running with the Stack-Tek Controller (STC-XX). This innovative design replaces failing OEM electronics with new fully supported controls. Our board and software design brings you the operational features that are already familiar to your operators. Optional communications interface enables serial or discrete communication to current and future upstream and downstream equipment.

STC-XX Replaces the following items no longer supported by the OEM:

- Touch Screen Display
- Card rack and all boards
- DC power supplies

Current models offered are:

- STC-30: Quipp™ 300 series stackers
- STC-35: Quipp™ 350 series stackers
- STC-40: Quipp™ 400 series stackers
- More models are in development

STACK-TEK Products are distributed exclusively by:

Printing & Packaging Technologies, Inc.
